**LEARNING PATHS BASED ON THE USE OF SMARTPHONES
AND THEIR POTENTIAL TO DEVELOP STUDENTS KEY SKILLS**

Discover SMART LESSON

SMART LESSON will support teachers with suitable methodologies and tools to use smartphones as a innovative learning tool in class. The **SMART LESSON** aims to increase student's awareness of the use of smartphones as a learning tool, enhancing their motivation in class, and most important, develop students' digital skills related to the five areas of the European framework *DigiComp 2.1*. To address these challenges, the project will design and implement two new tools: **1. SMART LESSON KIT: a tool that contains the methodology for designing new learning scenarios, also including a reasoned guide to the tools that can be used in lessons via smartphone; 2. SMART EVALUATION METER: a student evaluation tool, accompanied by guidelines that clarify the process and the skills to be evaluated in digital teaching.**

**SMART
LESSON
WILL
PROVIDE...**

**Open tools
& resources designed
for teachers & students**

**Discover innovative
learning methodologies
using smartphones in class**

**Assess the training
activities with the SMART
EVALUATION METER**
